

Amendments to the Abstract:

Please replace the Abstract on page 44 with the following:

--The invention provides methods of using dihydroxy unsaturated fatty acids as markers for identifying patients with a disorder associated with abnormal regulation of the cytochrome P450 metabolism or oxidation of unsaturated fatty acids. ~~In preferred embodiments~~
For example, linoleic acid diols, including, ~~but not limited to~~, leukotoxindiol, ~~are~~ can be used as a diagnostic tool for identifying patients with pre-eclampsia, eclampsia, and pregnancy-induced hypertension.--
